

COLLEZIONE LISCI

Questa selezione comprende tre tipologie di rivestimenti: i pannelli melamminici, i pannelli impiallacciati ed i pannelli in laminato plastico HPL. I rivestimenti melamminici sono pannelli composti da fibra di legno (M.D.F.) di alta qualità che garantisce una eccezionale stabilità meccanica e dimensionale. Il supporto in M.D.F. è rivestito con una impiallacciatura di essenza legnosa sintetica protetta con resine termoindurenti che conferiscono una elevata resistenza fisico-meccanica alla superficie. Questi rivestimenti sono utilizzabili all'esterno in posizione riparata dall'azione diretta degli agenti atmosferici. I pannelli impiallacciati truciolari sono costituiti da scaglie di legno vergine o riciclato, pressate ed incollate. Il supporto viene rivestito con un sottile foglio di legno pregiato applicato su una o entrambe le facce a vista. Le sue superfici sono lisce e regolari. L'utilizzo di tali rivestimenti è possibile solo in posizione riparata. I pannelli laminati ad alta pressione sono costituiti da numerosi strati di carta impregnati con resine termoindurenti e compattati attraverso l'azione combinata di calore e alta pressione. Il risultato è un prodotto stabile, non reattivo, omogeneo, con bassissima permeabilità ed estremamente robusto: resistente a graffi, urti, abrasioni, sostanze chimiche e calore; caratteristiche che lo rendono il materiale ideale per una vasta gamma di applicazioni soprattutto in ambiente esterno. I pannelli lisci offrono le calde tonalità del legno, dai moderni rovere sbiancato, teak e wengè fino ai classici mogano, ciliegio e noce. Linee essenziali che si abbinano bene agli interni contemporanei.

SMOOTH COLLECTION

This selection includes two typologies of coverings: the melamminics panels, the veneered panels (wooden composition) and plastic laminate HPL panels. The melamminics coverings are panels composed by wood fiber (M.D.F.) of high quality that guarantees an exceptional mechanical and dimensional stability. The support in M.D.F. is dressed again with a veneering of protected synthetic woody essence with thermosetting resins that confer an elevated resistance physical-mechanics to the surface. This panels are suitable for external environments but at repair from direct action of atmospheric agents.

The veneered panels are constituted by virgin or recycled wood flakes that are pressed and glued. The support is dressed again with a thin sheet of appreciated wood applied on one or both the faces to sight. Its surfaces are smooth and regular. The use of such coverings is possible only in protected position. High-pressure laminates panels are made of numerous layers of paper saturated with thermosetting resins and bonded through the combined action of heat and high pressure. The result is a stable, non-reactive, homogenous, non-porous, high-density product with an extremely low permeability. HPL is an exceptionally rugged material resistant to scratching, impact, abrasions, chemicals and heat, making it ideal for a wide range of applications especially for external use. The smooth panels offer the warm tonalities of the wood, from the modern whitened oak, teak and wengè up to the classical mahogany, cherry and walnut. Essential lines that are combined well to the contemporary interiors.
